SUMMARY

Software engineer with hands-on experience building AI-enabled enterprise applications, integrating LLM APIs, and developing Python/Django backend services with SQL databases. Delivered retrieval-backed role recommendations, secure REST integrations, and an AI-powered iOS application. Interested in applying strong software and data fundamentals to cloud-based AI solutions.

EXPERIENCE

Software Developer (Full Stack)

Neviton Softech Private Limited **January 2026 - Present**

- Develop Python/Django APIs and JavaScript interfaces for enterprise data governance and access management, integrating MySQL and Oracle databases.
- Built and debugged multi-step access provisioning workflows with REST APIs, entitlement selection, approval routing, validation, and system integrations.
- Developed an AI-assisted chatbot combining LLM API integration, database-backed retrieval, and role recommendations with input validation and permission-aware controls.
- Integrated TeamDynamix ticketing, SailPoint IdentityIQ, and Active Directory workflows; collaborated with stakeholders to translate access requirements into working software.
- Implemented data maturity assessment workflows and SQL-backed reporting, including structured datasets, editing interfaces, and Excel report generation.

Co-Founder / AI Developer

KANDA FITNESS APPLICATION SERVICES, L.L.C. **May 2024 - August 2025**

- Co-founded and developed a SwiftUI iOS fitness application released through the App Store, taking features from prototype to user-facing delivery.
- Integrated Gemini multimodal AI with curated CSV fitness reference data and structured user inputs to generate personalized guidance.
- Designed prompt assembly and data handling flows that combined user information with reference content and persisted AI-generated results.
- Evaluated LLM provider options and refined responses, error handling, and application behavior through iterative testing and debugging.
- Worked across mobile interfaces, API integration, data processing, and release preparation to deliver an end-to-end AI-enabled product.

Software Engineer (Capstone)

Toyota Motor North America **August 2024 - December 2024, Plano, Texas**

- Developed and tested C/C++ cryptographic plugin functionality using QEMU and OP-TEE, connecting host-side software with trusted execution components.
- Implemented signature and integrity validation, telemetry, and test instrumentation to investigate failures and performance behavior.
- Debugged integration issues across components and documented findings to improve reliability during system testing.

IT Security Analyst / Student Worker

The University of Texas at Dallas - OIT **May 2024 - December 2024, Richardson, Texas**

- Supported PeopleSoft role-based access provisioning, coordinated approvals, and queried SQL access history to investigate permissions.
- Reviewed application security and privacy requirements and communicated findings with technical and nontechnical stakeholders.

IT Service Desk Associate

American National Bank of Texas **September 2022 - August 2024, Plano, Texas**

- Built 50+ Active Directory/MECM onboarding templates, reducing workstation and account setup time by 65%.
- Supported enterprise IT operations, automated endpoint workflows, and troubleshot authentication, software, and infrastructure issues.

EDUCATION

Masters of Science in Computer Science and AI

Boston University • Boston, Massachusetts • 2027

- Part-time graduate program pursued outside standard work hours.

Bachelors of Science in Computer Science

University of Texas at Dallas • Dallas, Texas • 2024

SKILLS

Languages & Backend: Python, SQL, Java, JavaScript, C/C++, Django, FastAPI, REST APIs
AI Development: LLM API Integration, Gemini, Retrieval-Backed Applications, Prompt Engineering, Response Validation
Data & Tools: MySQL, Oracle, MSSQL, PostgreSQL, Data Processing, Excel Reporting, Git, Docker
Application Development: API Design, Debugging, Testing, JavaScript Interfaces, SwiftUI, iOS
Security & Systems: Authentication, Authorization, LDAP, SailPoint IdentityIQ, Active Directory, Java/Tomcat
